

Spectrum®

High-Speed, Multi-Head Quilter

Chainstitch quilter from Gribetz International is a unique, multi-head quilting machine with distinct needle-control technology.

The Spectrum® quiltier uses newly developed Gribetz engineering to turn on/off 15 independently sewing needles to create patterns unlike any conventional three-bar quilt machine. It consists of two rows of independently controlled sewing heads that can sew at speeds up to 1450 RPM. Spectrum is built on the highly successful V16™ framework for high-volume production with high-grade components for precise pattern definition.

- Independent sewing heads eliminate manual needle changes for pattern changes.
- 15 independent sewing heads.
- Sews a variety of Class I, II, and III patterns, all Tack & Jump (Class IV), and distinct needle patterns.
- Sews creative pattern designs with great productivity.
- Equistitch ensures equalized stitch length in all sewing directions.
- Compatible with Gribetz AutoSchedule® and BatchMode for greater efficiency/profits.
- Innovative thread trim design cuts top and bottom thread – eliminating tails.

Gribetz® is the world's leading mattress machinery manufacturer with over a century of experience in machine design. Through rigorous stress and strain analyses, and 3D modeling, our engineering team prides itself in building the most durable state of the art machinery in the industry. We specialize in manufacturing high tech computerized quilting machines, panel cutters, automated and conventional sewing machines, material handling solutions, and mattress-packaging equipment.
